Abstract (en)

[origin: EP2353411A1] The device has a cylindrical sleeve (2) whose inner diameter (di) is measured so that the sleeve is positively and completely attachable to a cigarette and the cigarette protrudes over both free ends (22) of the sleeve. A sleeve cover (3) exhibits cross-sectional thickness of about 1 mm. An outer cover surface (4) of the sleeve comprises a milled-symmetrical section (6) with outer diameter that is smaller than outer diameter of the outer cover surface. An annular groove (8) is provided on the sleeve, where the groove is milled in the symmetric section. The sleeve is made of metal material.
