Abstract (en)
[origin: EP2353429A1] The arrangement (2) has two rings (4, 10) for enclosing two cylindrical receiving spaces (6, 12) and provided for mounting on fingers. Two ring surfaces are provided with two circumferential angles of inclinations opposite to a normal of two receiving axes, respectively. One of the circumferential angles of inclinations comprises an amount in opposite direction relation to the other circumferential angle of inclination to allow a complementary rest against each other for a ring surface (16) at other ring surface (20). The amount of the angles of inclinations lies between 10 and 30 degrees.
