Abstract (en)

[origin: EP2353437A1] The fitting (2) has an inner chamber (3) accessible from a front-side via a corner cabinet door (4), and suspension arms (8, 11) jointly connected with a lower side of shelf boards (6, 7) and a side wall part (2.1) in a pivotably movable manner. The suspension arms are supported at a retaining device (10) i.e. retaining rail, connected with the side wall part in a height-variable manner. The suspension arms transfer the shelf boards on a preset movement path from an inner position into an outer position and support the shelf boards.
