Abstract (en)

[origin: EP2353672A1] The glideboard has a gliding layer made of sheet of low coefficient friction material, and a central longitudinal core (7) with lateral surfaces connected to left and right edging strips (13a, 13b), respectively. One of the edging strips includes internal and external edging strip elements (13'a, 13'b, 13"a 13"b) on a length part of the glideboard. The edging strip elements are joined together by the cooperation of shapes between internal lateral surfaces (18'a, 18'b) of the internal edging strip elements and external lateral surfaces (18"a, 18"b) of the internal edging strip elements.
