Abstract (en)
The invention comprises an arrangement and a method in wood block (2) handling. The method comprises - sawing blocks (2) of a desired length from an elongated wood material with one or more automatic cutting saws, which blocks have a longitudinal direction (S); - separating the blocks (2) after the automatic cutting saw into different grades according to a desired position of the sawed block (2); - transferring the blocks in a transfer device (1) in their longitudinal direction (S) toward a next handling stage; - turning the sawed blocks (2) around their longitudinal axis into the desired position before they are fed into the next handling stage, - turning the sawed blocks (2) around their longitudinal axis in the turning chute (3) arranged in connection with the transfer device (1) at the same time as the blocks (2) are transferred in the longitudinal direction toward the next handling stage.
