Abstract (en)  
[origin: EP2353820A2] The wood processing system has a workpiece support formed for supporting of workpieces (1), where a processing device is arranged in the workpiece support between a forward support area (2a) and a rear support area (2b). The processing device has a processing unit (15) for receiving a machining tool (16). The processing unit is movable in two linear axes mutually perpendicular to each other. A transport device is provided for displacement of the workpieces resting on the workpiece support.
