Abstract (en)
[origin: EP2354327A1] A working machine includes a base machine (23) and a working attachment (24). The working attachment has a base-end boom (25), a lead-end boom (26), and an arm (27). The working machine is collapsible into a triple-folded state, with the base-end boom being located on the upper side and the arm being located on the lower side with respect to the lead-end boom, as a posture of the working machine for transport. The working machine further includes a lead-end boom cylinder (30) for moving the lead-end boom, and an arm cylinder (31) for moving the arm. The lead-end boom has a first lead-end boom cylinder attachment portion (26e-26f) for mounting the lead-end boom cylinder, and a first arm cylinder attachment portion (33) for mounting the arm cylinder. The first lead-end boom cylinder attachment portion is disposed at a position different from the first arm cylinder attachment portion in a widthwise direction of the working attachment, and lower than the first arm cylinder attachment portion in the transport posture.
