Abstract (en)

The present invention relates to a combination of a urinal with a hand washing facility. Therein, the waste water from the hand washing facility is used for flushing the urinal. The hand washing facility and the urinal are in close proximity to each other and/or in physical contact with each other. The hand washing facility is offset relative to the urinal so that the imaginary plane as defined by the center plane running vertically through the urinal is positioned at an offset angle relative to the imaginary plane as defined by the central vertical plane of the hand washing facility. Said angle is between 20° and 80°, preferably between 30° and 75°, further preferably between 40° and 70°.
