Abstract (en)

[origin: EP2354344A2] The device has an attachment arrangement and a retaining element (10) that extend through a building wall (W) and fastened to or in a building ceiling (D) by the attachment arrangement. Another attachment arrangement is positioned in a recess in a girder (B) in sections for fastening another retaining element (20) or the former retaining element. A support arrangement (30a) is positioned in a recess in the building wall in sections. Lateral attachment sections (11a) are arranged in a longitudinal direction of one of the retaining elements.
