Abstract (en)

[origin: EP2354414A2] The safety locking device has a locking element (110) and another locking element connected with a door or window frame (230) and a casement frame (220), respectively. The locking elements are connected with each other by a fixing element for fixing the casement frame opposite to the door or window frame. One of the locking elements is formed as a protective housing for controlling damages of the safety locking device, and the other locking element is formed as a locking strip and movable parallel to a longitudinal axis of the former locking element.
