Abstract (en)
[origin: EP2354730A2] An improved cooling unit (1) is described, composed of a supporting and containing structure comprising at least one base (3) on which at least one compressor (5) is arranged, communicating on its front part with at least one condenser (7) and on its upper part with at least one evaporator (9), such supporting and containing structure comprising at least one shelf (13) for supporting such evaporator (9) arranged in a substantially horizontal position above such compressor (5), such shelf (13) being joined in an edge thereof to at least one deflecting profile (15) adapted to convey air flows (F c) coming from at least one second axial fan (17) towards such evaporator (9).
