Abstract (en)
[origin: EP2354732A2] The door has a door storage compartment (10) locked at different positions of a door interior side. A rod (20) is provided at the interior side and forms a guide for the compartment. The rod or a region of the door interior side comprises a component i.e. knob (22), which combine with another component e.g. movable flap, slider or rotating lever, arranged at the compartment. The compartment is locked by the two components in a desired position. The door storage compartment or the latter component contacts the rod and/or the knob.
