Abstract (en)
Disclosed herein is a gaming server, land-based gaming terminal, and an interactive peer-to-peer gaming system relating to a gaming application utilising a first gaming table (3010) and a predefined number of first tokens (3015), wherein said first gaming table (3010) includes a plurality of cells corresponding to said number of first tokens (3015), each cell of said first gaming table being associated with a unique identifier, and further wherein each of said first tokens has an associated value. The method comprises the steps of: populating (1015) said first gaming table by storing each of said first tokens in one of said cells of said first gaming table; iteratively selecting (1020), by a first player, one of said cells of said first gaming table to reveal one of said first tokens stored therein, until each of said first tokens has been revealed; and utilising said values associated with said first tokens to determine a score for said first player, based on an order in which said first tokens were revealed.
