Abstract (en)
[origin: WO2010055445A2] A lid structure for use with a container for storing personal care products is disclosed. The lid structure includes a lid top that is connected by a hinge to a lid base. In exemplary embodiments, the lid structure includes a lid-activation button that when pressed allows the lid top to rotate about the lid base giving a consumer access to the contents of the container. The lid-activation button is wide enough to allow a consumer to easily make contact with the lid-activation button and cause the lid top to open. Additionally, the lid-activation button functions so that the lid top is released independent of where the lid-activation button is pressed by the consumer.
