Abstract (en)

[origin: WO2010054848A1] The invention relates to a device (120) for detecting and providing information that can be associated with a football player, said device containing: an acceleration sensor (129) for detecting accelerations influencing the devices, a memory unit (121) for storing measured acceleration values with associated time stamps, and an ID associated with the device (120), and a radio unit (128) for receiving a first radio signal (150), with a first time stamp, the first radio signal representing a deformation of a ball, and for sending a second radio signal (160) containing the ID associated with the device (120), in the event that an examination of the values in the memory unit indicates that an acceleration has been detected by the device at the corresponding moment.
