Abstract (en)

[origin: WO2010051874A1] The invention relates to a method of adjusting web tensioning in a processing machine for processing a material web (101), in particular in a shaftless printing machine (100), wherein for the purpose of adjusting the web tensioning, in a first web-tensioning section (34), which is bounded upstream by a first clamping location (3) and downstream by a second clamping location (4), the first clamping location (3) is given an adjusting command, and at least one clamping location (1, 2), which is located upstream of the first clamping location (3) as far as the web tensioning is concerned, and at least one clamping location (5), which is located downstream of the second clamping location (4) as far as the web tensioning is concerned, are pre-controlled in dependence on the first adjusting command, wherein the second clamping location (4) is not adjusted.
