Abstract (en)

[origin: WO2010052278A1] The present invention relates to a circuit (22) for measuring an efficient current ($i_{eff}(t)$) of a signal to be monitored ($i(t)$), characterised in that the circuit includes means for making a continuous reference signal ($i_{DC}(t)$) depend on the signal to be monitored ($i(t)$) so that the efficient current ($i_{DCeff}(t)$) of the continuous reference signal ($i_{DC}(t)$) is equal to the efficient current ($i_{eff}(t)$) of the signal to be monitored ($i(t)$).
