Abstract (en)

[origin: WO2010066480A1] The invention creates a method and a system (1) for supplying target information of an event message for an event occurring on a tag reader (2), wherein the target information is obtained from a signed digital certificate of a tag (4). The event is triggered on a tag reader (2) and can be evaluated by a target computer (6), for example, a server. Said method and system increase the flexibility in a reconfiguration and also increase the security against manipulation.
