Abstract (en)

[origin: EP2182653A1] Method of transmitting data in a radio network, radio network and receiving station. A Method of transmitting data in a radio network (NW) with at least two sending stations (BS1..BS4), at least one relay station (RS1, RS2) and at least one receiving station (MS1..MS4) is disclosed. Moreover, a radio network (NW) and a receiving station (MS1..MS4) is disclosed. In a step a) the at least two sending stations (BS1..BS4) simultaneously send said data. In a step b) the at least one relay station (RS1, RS2) receives said data from the at least two sending stations (BS1..BS4) and stores said data. Then, in a step c) the at least one receiving station (MS1..MS4) receives said data from the at least two sending stations (BS1..BS4) and stores said data. In a step d) the at least one relay station (RS1, RS2) re-sends said stored data. Subsequently, the at least one receiving station (MS1..MS4) receives said data from the at least one relay station (RS1, RS2) in a step e) Finally, in step f) the at least one receiving station (MS1..MS4) combines data streams received in steps c) and e).
