Abstract (en)

[origin: WO03013680A1] Summer toboggan runs where the driver can individually adapt the speed of the toboggan by actuating a brake often experience the problem that a faster toboggan crashes into the rear of a slower preceding toboggan. This happens frequently in the outrun zone. The aim of the invention is therefore to provide such an outrun zone with a braking zone (40) with brake devices that function speed-selectively so that toboggans that have a slower speed are only slightly slowed down or not at all, while toboggans with an excess speed are slowed down to the desired speed.
