Abstract (en)
[origin: EP2357294A2] The service ceiling (1) has an inherently rigid support frame (2) made of beams (4), which is fixed in the area of the ceiling of the room, a supply duct (10) for supplying fresh air and supply lines (6) for supplying sanitary media. The supply duct has a longitudinally stretched hollow body, which is detachably retained at the lower side of the support frame. The hollow body is made of dimensionally stable inherently flexible material, particularly metal sheet or plastic.
