Abstract (en)
[origin: WO2010054742A1] the present invention relates to an upper roller (1, 1') for a drawer, comprising an axle middle piece (2, 2') as well as two journal bearings (4), which are disposed on opposite sides in the axle middle piece (2, 2') and on the free ends of which in each case at least one roller bearing is disposed for mounting an outer ring (7, 1'), wherein, for each upper roller, different axle middle pieces (2) are available, which are matched to the respective, different sections and/or saddle shapes of upper roller supporting arms and loading arms, that, for accommodating the journal bearing (4), boreholes are disposed in the axle middle pieces (2, 2'). All bearing devices, required for the mounting, are disposed on the journal bearing (4,) so that, when the upper roller (1) is assembled, the axle middle piece (2, 2') can be exchanged independently of the journal bearings (4) with roller bearing and outer ring (7, 7') used, for matching to the different sections and/or saddle shapes.
