Abstract (en)
[origin: WO2010069777A1] The invention relates to a device for texturing and winding a plurality of threads wherein a plurality of delivery rollers, a heating device, a cooling device and a spinner device having a multi-digit winding device are combined. The winding device has at least two projecting spooling spindles on which a plurality of winding points are designed for simultaneous winding of threads into coils. In order to attain as compact an arrangement as possible, according to the invention, the cooling device, the texturing device and one of the delivery rollers are arranged in a straight thread path, rectified to the spooling spindle.
