Abstract (en)  
[origin: WO2010069544A1] The invention relates to a method and to corresponding systems for visualizing an address space and for organizing automation-related data, wherein according to a first method variant the user interface (1) of a display device of a computer system is divided into a plurality of configurable address space display regions (2, 3, 4). Each address space display region (2, 3, 4) is divided into a first partial region (5.2, 5.3, 5.4) and into a second partial region (6.2, 6.3, 6.4), wherein the address space display regions (2, 3, 4) all represent the same address space that can be chosen by a user. In the first partial regions (5.2, 5.3, 5.4), the node network of the address space is visualized in different display modes (7, 8, 9), in the second partial regions (6.2, 6.3, 6.4) details of a node chosen by the user are displayed. When the user navigates in one of the first partial regions (5.2, 5.3, 5.4) and carries out a change to the node network, the structure of the node network and relations between the nodes in all first partial regions (5.2, 5.3, 5.4) are automatically synchronized.
