Abstract (en)

[origin: WO2010069735A1] The invention relates to a method for recording and evaluating measurements related to the condition of a patient for configuration of a portable, patient-controlled device operated to record said measurements, wherein - at least one measurement describing the condition of the patient is recorded by the device, - the measurement and/or at least one parameter derived therefrom is/are transferred to an evaluation device via a communication connection, - the measurement and/or the parameter is/are evaluated by or on the evaluation device by an expert system and/or an expert to determine patient-specific information, - configuration data ascertained in consideration of the patient-specific information is transferred back to the device via said or another communication connection, and - the device is configured according to said configuration data.
