Abstract (en)  
[origin: WO2010069625A1] The invention relates to an electric plug connector having a connection module, which has multiple contact elements to establish an electric connection to corresponding contact elements of a connection socket, and having a terminal module, which has multiple terminal elements for connecting one lead each of a cable, wherein the terminal module can be detachably connected to the connection module for establishing an electric connection between the terminal elements and one contact element each. In order to refine the plug connector such that it can be connected to the cable more easily without special tools, according to the invention the connection module comprises a housing into which the terminal module can be inserted, as well as a tension relief member that is connected to the housing and extends over the terminal module, wherein a cable connected to the terminal module can be secured to the connection module via the tension relief member.
