Abstract (en)
[origin: WO2010051925A1] The invention relates to a distribution cabinet (1) for communications and data technology, comprising a frame (2), wherein at least one roof module (30), side walls (32), at least one rear wall (31) and at least one door (33) are fastened to the frame (2), wherein the frame (2) exhibits vertical stays (3) and lower and upper horizontal stays (8-11, 4-7), wherein the roof module (30) is fastened on the horizontal stays (4-7), wherein at least one side wall, one rear wall and/or one door is designed as a double wall (31-33), wherein an air stream, flow-connected to an air stream in the roof module (30), can flow in the double wall (31-33), wherein the upper horizontal stay (4-7) to which the double wall (31-33) is fastened comprises a fluidic profile enabling an at least partially horizontal air flow from the double wall (31-33) and an at least partially vertical air flow to at least one opening (30a) in the roof module, wherein the opening (30a) in the roof module (30) is arranged offset to the inside to the opening (34) of the double wall.
