Abstract (en)

[origin: EP2359983A2] The guide has two defined detachable accommodating sections (13) so as to realize a modular structure of the rolling body guide. The accommodating sections are attached at an accommodating section carrier in a defined and detachable manner. The accommodating sections are removed perpendicular and/or axially towards a rotation axis (34). The carrier comprises a bearing accommodation unit to accommodate the accommodating sections. The sections are arranged at distance from each other with respect to an accommodating circumference and comprise guides for a rolling body (10). Independent claims are also included for the following: (1) a rolling tool comprising a rolling body and a rolling body guide (2) a method for replacing a defect rolling body guide and/or defect rollers of a tool for final expanding or press-polishing of an inner surface or an outer surface of a tubular body.
