Abstract (en)

[origin: EP2360948A2] The tool has first and second tool parts (13, 14) for dismounting two ear pieces from a listener, respectively. A third tool part mounts the ear pieces into the listener. Elongated base bodies are divided into body parts (10, 11) that are plugged with each other toward longitudinal axis of the base bodies. The tool parts are arranged at the body parts, where the tool is made of flexible plastic. The body parts include an aperture at front ends. The third tool part comprises a shaft whose longitudinal axis runs coaxial with the longitudinal axis of one of the body parts.
