Abstract (en)
[origin: WO2010072931A1] The invention relates to a tool that includes a mechanism for absorbing the energy transmitted to the gripping means, said mechanism including four main elements, i.e. a carrier body (1), a handle (2), an elastic return means (3) and an interchangeable head (4), said four members being assembled so as to form a common base and being capable of receiving additional means which are integrated into said base depending on the pertinent use.
