Abstract (en)

[origin: WO2010072377A1] The invention relates to a handle for doors or panels, especially on vehicles. An actuation element (10) is provided, such as a button or switch, which is integrated in the handle (50) and comprises an at least regionally elastic sealing element (30) and at least one dimensionally stable housing element (20). According to the invention, a button plate (21) having at least one sealing projection (22) is provided, wherein the sealing projection (22) can be operatively connected to the elastic sealing element (30) such that the sealing projection (22) penetrates into the material of the sealing element (30) at least regionally. Thus, the inside (13) of the actuation element (10) is sealed with respect to the outside (14).
