Abstract (en)

[origin: EP2361701A1] The compression device (100) has a frame that is applied around the workpiece. A primary die stock (140) is arranged within the frame in a moving manner, which is applied during compression process at the workpiece. A piston (K1,K2) is movable supported in a cylinder (Z1,Z2) that is coupled with the frame such that the piston is performed on the primary die stock under the effect of a hydraulic fluid pressure.
