Abstract (en)

[origin: EP2361733A2] The device has housings provided with narrow sides (5, 6) and broad sides (7, 7') and stored in a tool insert (4) in a form of screw rotary bits inserted in a rotary drive tool (3) i.e. ratchet lever (11). The drive tool is engaged into a tool receiving opening (10) attached to one of the narrow sides such that six edge sections of the tool insert are inserted into an insertion opening (12) to use the housings as a tool handle. A frame part (1) forms a part of one of the broad sides. A pivoting part (2) is held in a recess of the frame part in a closed position.
