Abstract (en)
[origin: EP2362009A2] The water-conducting household appliance (1) has a housing (2), a dispensing compartment (3) and a treatment area. The dispensing compartment is partially inserted in the housing. A flow of gases is allowed from the treatment area over the dispensing compartment of the housing. The dispensing compartment has a filter device (10) by which the gas flow is guided. The filter device comprises an ozone filter. The ozone filter filters ozone contained in the gas flow by absorption, decomposition or chemical reaction.
