Abstract (en)

[origin: EP2362039A2] A handle specific by the mechanical subassembly keeping the locking slug (7) in releasing or blocking position, which is totally contained in the handle lever (20). The mechanical subassembly keeping the locking slug (7) in releasing position consists of a flat rotary disk (5) with a tongue (12) set in the body (2) and rigidly connected with the stem (1 a), which is a part of the lever (1).
