Abstract (en)
[origin: EP2362136A1] The assembly (1) has a pot lighting device (3) with luminous sources (4) supplied by electric supply units e.g. rechargeable batteries or rechargeable cells, that are arranged in a cylindrical shaped case (5), where the sources include LEDs (40). A cylindrical housing receives the case. The housing is provided in bottom and formed at level of an outer wall of a transparent or translucent glass pot (2). The case is integrated in the housing. A flexible joint e.g. toric joint, is provided between the case and a wall of the housing to assure maintenance and blockage of the case in the housing.
