Abstract (en)
[origin: CA2735684A1] The invention relates to a drink can closure element (10) comprising a cover part (12) which is to be placed in an opening of a drink can (30), and a locking mechanism (16) which is embodied and/or arranged on the cover part (12), said locking mechanism being embodied and/or arranged in such a manner that the drink can closure element (10) arranged in an opening of a drink can (30) can be closed in an opening of a drink can (30). The cover part (12) is designed and arranged in such a manner that, when the drink can closure element (10) is in an opening of the drink can (30), said cover part can be elastically deformed between at least two states. Said locking mechanism (16) is embodied and arranged on the cover element (12) in such a manner that, in at least one of the at least two states of the cover element (12), said locking mechanism (16) is arranged further inwards in the radial direction in relation to the cover element (12) than in at least one other of the at least two states of the cover element (12).
