Abstract (en)
[origin: EP2363341A1] The device has a hollow section (2) for receiving a weapon (4), and a mounting bracket (10) fastened at the hollow section and overlapping the weapon in a storage position. A clamping element (8) clamps the mounting bracket on the weapon and is actuatably designed with a motor. The clamping element is operated by the motor for loosening the mounting bracket. The clamping element includes a lock holding the mounting bracket in a fixed position of the weapon, where the lock is fluidically operated. A ball grid connection fixes an actuator into a hollow piston.
