Abstract (en)
[origin: EP2363347A1] The container (1) has multiple fixed walls (7,8,8'), two doors (5,6), which are brought into an open position and into a closed position, a recognition unit and an adjusting unit. An adjusting element is arranged in the upper area of the former door such that it is brought in the adjusting positions for providing the release state and non-release state of the recognition unit. The recognition unit is formed as Radio frequency identificationtransponder.
