Abstract (en)
[origin: EP2363356A1] The silo (1) has silo walls with a trapezoidal contour shape connectable with different supports (20, 30), where each support has three coupling strips running in a longitudinal direction of the silo walls and comprising a trapezoidal contour shape corresponding to the silo walls. The supports have angle of 120 degrees to the strips. One of the strips is offset in height to a wall of a support body of one of the supports about trapezium height with respect to the other coupling strip of another wall of another support body of the other support.
