Abstract (en)  
[origin: EP2363556A2] The lock (1) has a housing, a rotatably supported bolt (2) and a bolt flap (4) supported at the bolt in a pivotable manner over a bearing. The bolt flap has an attachment that acts together with an engagement surface of an elastically supported latch (3). The bolt flap has a control pivot that acts together with a control connecting rod in the housing. Holes are formed in the housing for fastening the lock to a door frame, and recesses (22, 23) are formed in a flat spring (19), where one of the recesses comprise a side section that serves as an end stop for a lock pushing rod.
