Abstract (en)

[origin: EP2363565A2] The spacer (10) has a flexible, elongated base body (12) extending along a longitudinal direction (14) and running parallel and at a distance to glass disks in a mounted condition. The base body has two side surfaces attached to the glass disks and a lower side extending in the direction, where the lower side extends transverse to the side surfaces. A plate-shaped barrier element (18) is arranged in the lower side and formed as a steam and gas diffusion barrier, where the barrier element is made of stainless steel or plastic and has a corrugation aligned transverse to the direction.
