Abstract (en)
[origin: EP2363566A2] The sliding door (1) has a door leaf (2) which is conveyed between an open position and a closed position, where the door leaf releases a through-opening in the open position. The through-opening has a base structure (3). A holding element (4) is received in the base structure. A driving device (5) is connected with a brand sensor, so that the driving device is activated in fire.
