Abstract (en)

[origin: EP2363637A1] The support (300) has an electric connection strip (306) for electrically connecting a bulb (10) of an optical module in a lighting and/or signaling device of a motor vehicle. An adjusting unit adjusts the strip during withdrawal of the bulb from the support. The adjusting unit comprises an end (312) arranged on a support element cooperating with a conformation (16) by obstacle. The adjusting unit causes plastic deformation of the strip during its action. The strip comprises a fold (313) and a folded portion (319) terminated by the end.
