Abstract (en)
[origin: WO2010055266A1] The invention relates to a machine for closing various containers, including: - a frame (2), - a tray (3) provided with a recess (11) for receiving at least one container, - and a frame (17) provided with at least one device (18) for attaching a sealing member to the container placed in the recess (11). According to the invention, the tray (3) is provided with a top tray (9) provided with a recess (11) and intended, during the sliding of the tray (3), to engage with an abutment (13) so that the recess (11) occupies a pre-sealing position, the tray (3) being slidably mounted beyond the pre-sealing position to engage a system (20) for transforming the sliding movement of the tray (3) into a vertical translation movement between the top tray (9) and the frame (17).
