Abstract (en)
[origin: WO2010064193A1] The present invention refers to a modular lining for tunnels excavated with traditional methods, comprised of prefabricated reinforced-concrete modules, and to a method for manufacturing said lining. The modular lining subject-matter of the present invention, executed by the method it also subject-matter of the present invention, has the evident advantage of being manufactured by the laying of prefabricated modules, thereby evidently increasing structure efficiency and drastically decreasing execution times, in the last analysis also influencing realization costs.
