Abstract (en)

[origin: WO2010057284A1] The present invention refers to a protection and startup modular combo for airtight refrigeration compressor (1), requiring a low number of tools to produce several combo configurations, compared with previous techniques, as well as the use of simpler tools and the consequent cost reduction for development of such configurations. That combo (1) comprises at least one motor startup device (2) and at least one motor overload protection device (3), the motor startup device (2) being associable, in the manner of fitting, with the overload protection device (3), the protection and startup combo (1) being associated with at least one electrical feed terminal of the airtight compressor, the combo (1) being associable, in the manner of fitting, with at least one platform of electrical connectors, the combo (1) being associable, in the manner of fitting, with at least one cable press device (30).
