Abstract (en)
[origin: EP2364614A2] The device (74) has an ejecting mechanism comprising an ejector (13) that brings a movable furniture part i.e. drawer (2), from a closing position into an opened position. A releasing mechanism controls loading and unloading of a force storage unit i.e. spring (14). A force storage unit of a feeding mechanism partially loads the force storage unit of the release mechanism still reaching the closed position by a force transfer unit e.g. toothed wheel or lever gear (8). The toothed wheel is coupled with the ejector by a toothed rod or a friction rod.
