Abstract (en)

A mold (1) for the unidirectional pressing of ceramic articles, comprising a containment rim (2) that defines at least one receptacle (3) for forming a respective article (M) and at least one pair of mutually opposite male punches (4) for delimiting the receptacle (3), wherein at least one of the male punches (4) is provided with a plurality of holes (5), each of which has a first end (5a) in communication with the receptacle (3) and a second end (5b) opposite to the first end (5a) which can be associated with air suction means (17), the plurality of holes being also associable with means (18) for delivering a pressurized fluid through the corresponding second ends (5b), valve means (6) for selective flow control being further provided which are interposed between the plurality of holes (5) and the suction means (17) and the delivery means (18) and are operable by an electronic management and control unit that activates their opening and closure.
