Abstract (en)  
[origin: EP2364862A1] The stylus has a sleeve-like shaft (2), and a rod-shaped inner part (1) supporting a lead (4) and projecting from the shaft. The inner part is arranged in an inner side of the shaft, where the shaft and the inner part are connected with one another in an axially adjustable manner. An axially-extending marking formed at a longitudinal section of the inner part is partially immersed into the shaft during adjustment of the inner part. Locking recesses are formed at an outer peripheral surface (8) of the inner part or at an inner peripheral surface of the shaft.
